

# KEGG\_CALCIUM\_SIGNALING\_PATHWAY

## Heatmap of the Analyzed Geneset

The heatmap displays gene expression profiles for the KEGG CALCIUM SIGNALING PATHWAY genes. The rows represent individual genes, and the columns represent different conditions or time points. The color scale ranges from dark red (-2.0) to dark blue (2.0), with white representing intermediate values. The heatmap shows distinct clusters of genes with similar expression patterns.
